

# Visual analysis on Crypto Currencies using Power BI

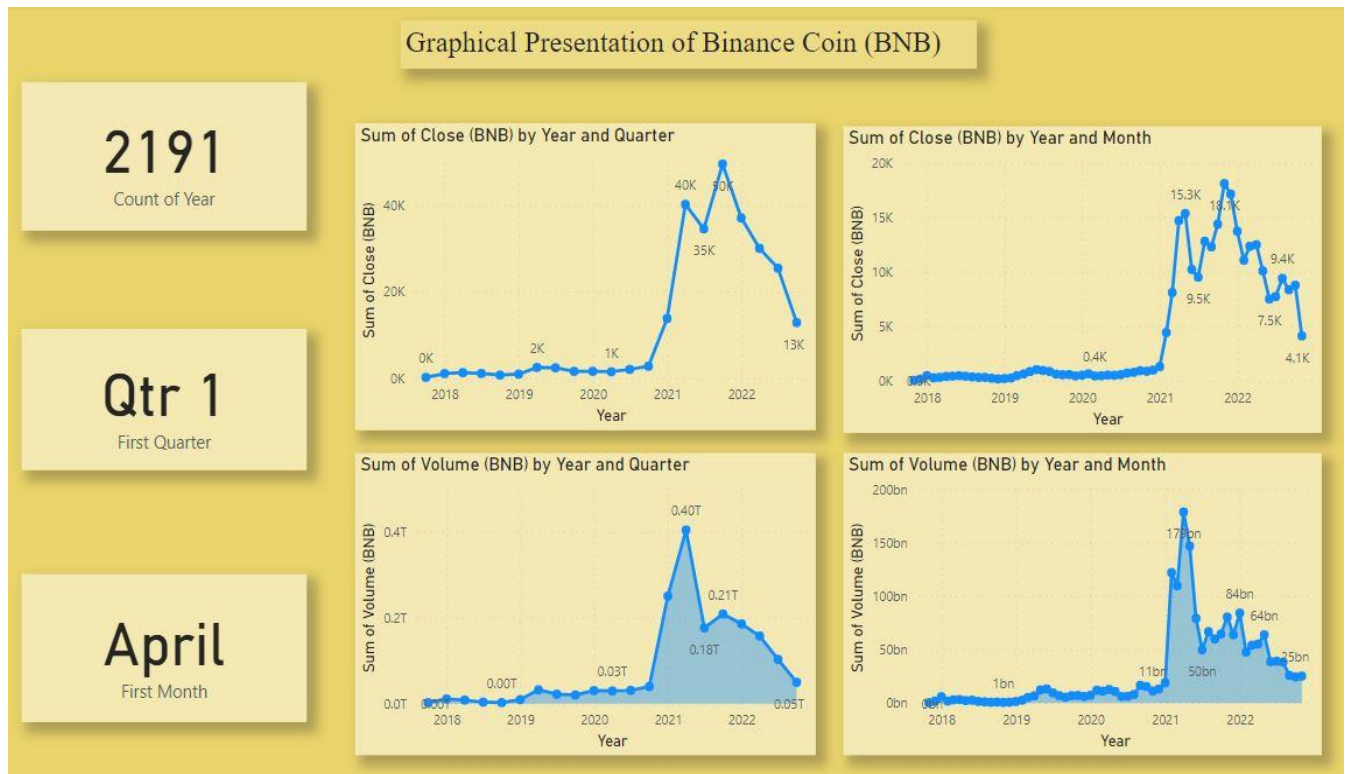

## 1. USDT :

USD is an abbreviation for the United States Dollar while USDT, on the other hand, is a symbol used to trade Tether tokens, a blockchain-based cryptocurrency, but its tokens are distributed in exchange for an equivalent amount of fiat money deposited into an established bank. The price value of a Tether token, is usually pegged to the US dollar, which is why the token is also denoted as USDT.

## 2. Binance Coin (BNC):

Binance coin is the crypto-coin issued by the binance exchange and trades with a BNB symbol. This coin runs on the Ethereum blockchain with standard ERC 20 and is limited to a maximum of 200 million BNB tokens.

### 3. Bitcoin:

Bitcoin (BTC) is a [cryptocurrency](#), a virtual currency designed to act as money and a form of payment outside the control of any one person, group, or entity, thus removing the need for third-party involvement in financial transactions. It is rewarded to blockchain miners for the work done to verify transactions and can be purchased on several exchanges.

Bitcoin was introduced to the public in 2009 by an anonymous developer or group of developers using the name Satoshi Nakamoto.

## 4. Ethereum:

ETH is a cryptocurrency. It is scarce digital money that you can use on the internet – similar to Bitcoin. If you're new to crypto, here's how ETH is different from traditional money. ETH lets you be your own bank. You can control your own funds with your wallet as proof of ownership – no third parties necessary.
